KRACK MICROCHANNEL EC AND LEVITOR II EC CONDENSERS

Benefits of AxiTop Diffuser Used with Krack Condensers

- Up to a 17 dBA reduction*
- 18% energy reduction**
- Up to 10% greater heat rejection and 15% greater airflow (CFM) with lower air turbulence at full speed
- Compact dimensions
- Easy installation/retrofits

* Compared to MXF-02 at equivalent CFM.

** Compared to LEVF with standard NEMA motor at equivalent CFM.

Refer to Krack technical bulletins for electrical and sizing information:

- Microchannel: MXCE_001_071015

- Levitor II: LEVE_001_083115

Krack Microchannel and Levitor II condensers are designed for energy efficient operation with low noise. Now, the addition of ebm-papst HyBlade fan, EC motor and AxiTop diffuser further improves efficiency and reduces noise.

The ebm-papst AxiTop diffuser increases airflow at the same blade speed compared to a standard fan assembly. This improves capacity and lowers energy, resulting in savings for the end user. Additionally, noise is reduced with the AxiTop diffuser, so the end user has the option of increasing fan speed and capacity with reducing noise.

Electronically commutated motors provide continuously variable speed operation resulting in significant energy savings. More accurate airflow control prevents wear and tear on the coil and extends condenser life. Electrical enclosures are designed for all-weather operation.

Taken together, the ebm-papst HyBlade fan, EC motor, and AxiTop Diffuser improve the end user's ability to select a Krack condenser at a speed, capacity and noise condition that meets their needs.

3-Year Warranty available on EC motors.

HyBlade® and AxiTop™ are trademarks of ebm-papst.
